

6/17/2021 Updates

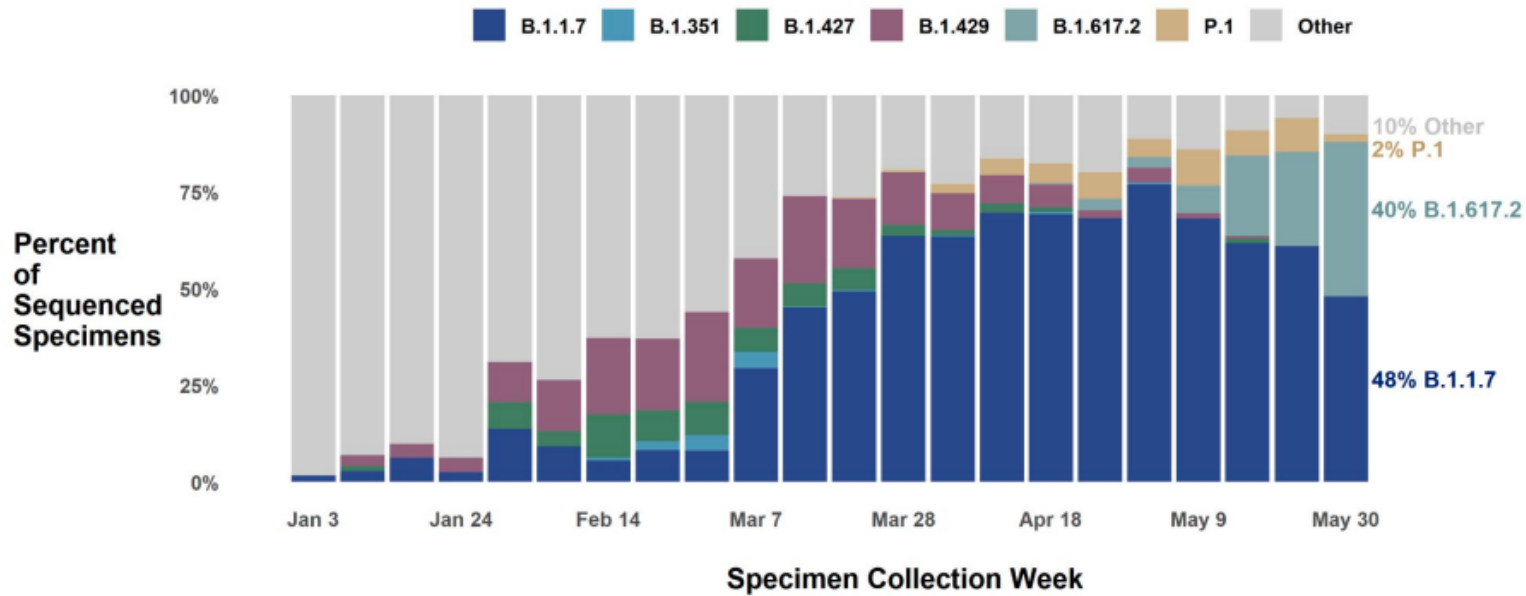

Joni Reynolds, RN/CNS, MSN

Public Health Director

Executive Director, Health and Human Services

GUNNISON COUNTY

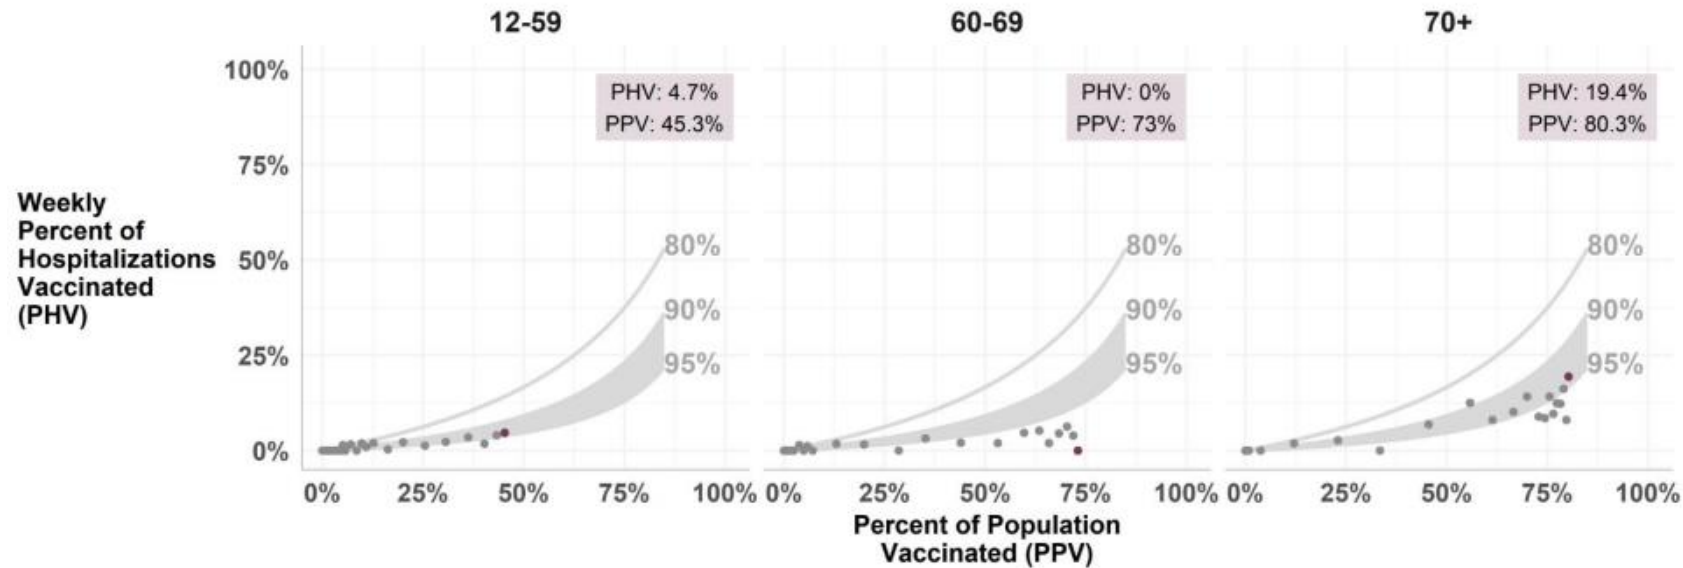

Delta Variant Growth

- Light blue represents B.1.617.2 (Delta) variant
- Increased transmission and potential for serious illness
- Prevalent throughout Western Slope

Vaccination & Severe Disease Prevention

Vaccine efficacy (%) in Colorado can be examined by looking at the relationship the percent of the population vaccinated (PPV) and percent of hospitalizations vaccinated (PHV).

Lagged by one week. Updated Jun 15, 2021

Gunnison County Vaccination Progress

- ▶ As of 6/14/21, nearly 11,000 County residents have received a first dose of vaccine
 - ▶ This is over 71% of the population eligible for vaccination
- ▶ With steady progress in vaccination, we have an opportunity to vaccinate 70% of our ENTIRE population
 - ▶ We continue to encourage those who have been considering the opportunity to get vaccinated
- ▶ Vaccination continues to be the best method of preventing severe disease and hospitalization associated with COVID-19

Vaccine Clinic Transition

State Vaccine Outreach Program

- ▶ The Colorado Department of Health and Environment is anticipating a massive vaccination outreach program
- ▶ This will include direct outreach to unvaccinated populations
- ▶ Gunnison County residents should expect to receive communications via text/phone/mail in the coming weeks

Vaccine Safety

- ▶ The CDC's Advisory Committee on Immunization Practices (ACIP) is expected to meet starting on 6/23/21 to examine the relationship between COVID-19 vaccines and the potential for myocarditis in adolescents
- ▶ Myocarditis is an inflammation of the heart tissue or the sac that surrounds the heart. It occurs in the general population for a variety of reasons, including viral infections
- ▶ This is a periodic review to examine whether or not there is a casual relationship between mRNA vaccines and rare cases of myocarditis in adolescents (particularly young men)
